

How to select the proper EAA Witness magazine

Prior to 2005, EAA produced the Witness in small and large frame configurations, depending on the caliber and frame material. Most EAA Witness handguns manufactured post 2005 have large frames. To check which frame size you own, take the following measurements on your factory magazine.

Small frame (Pre 2005) Witness magazines, as pictured above measure approximately 0.796" thick (fig. 1A) and approximately 1.25" long (fig. 1B).

Large frame (Post 2005) Witness magazines, as pictured above measure approximately 0.843" thick (fig. 2A) and approximately 1.369" long (fig. 2B)
