

## Instructions

### Mini Dog Bone Sharpening Instructions:

**Step 1** – Place the thumb on one Guide Guard and the tip of the second or third finger of the same hand on the other guide guard.

**Step 2** – Place the blade's edge against the ceramic rod. While maintaining a consistent angle and with even pressure gently push the entire edge across the rod in a single stroke, much like attempting to slice a thin layer off the rod.

**Step 3** – Stroke 3–5 times and repeat this on the reverse side of the blade.

**Step 4** – Continue this process until the blade is sharp.

### Cleaning Instructions:

When the alumina ceramic sharpening rod becomes dark with metal particles from the sharpening process, use the **Lansky® EraserBlock®** or household cleanser. The alumina ceramic sharpening rod will never wear out.

*Be Smart, Be Safe and Stay an Edge Above the Rest!*

**CAUTION:** *Knife sharpening is an inherently dangerous activity. Used properly this sharpener cannot hurt you but a carelessly handled blade or pointed object can.*
