HOW TO PUT YOUR FLY ON YOUR TENT

- 1.** Make sure that the black webbing that is sewn on around the perimeter of the Fly is face down.
- 2.** The Fly will have multiple grommets on two sides and only one grommet centered on the other two sides. The single grommet will be placed on each end of the peak of your tent. While the multiple grommets will run along the eaves of your tent sides.
- 3.** Make sure that the stove jack opening on the fly is placed in the same corner as the stove jack opening on the tent. And the seams are running up and over the tent from one side to the other.
- 4.** Tie the ropes on the Fly and stake out either with the same stakes that you used for the tent or you can stake the Fly out with separate stakes.
