

NOTE: Remove can from outer box and sealed bag before use.

The silica beads are a light orange color when recharged. They will turn to a darker green color as they absorb moisture. The silica will continue to absorb moisture after they have changed color. Generally, the silica will protect 57 cubic feet for about 3 to 6 months in normal conditions before recharging is required.

RECHARGING INSTRUCTIONS: (Keep these instructions for future use)

1. Remove the lid from the can. Remove indicator.
2. Do not preheat oven.
3. Place can in center rack of oven.
4. Set oven to 225° - 250° F
5. Heat for 3 - 5 hours
6. For faster recharge, spread the silica beads loose on a cookie sheet.
7. Allow to cool for about one hour and return product to safe.

NOTE: Product will begin to reabsorb moisture immediately, so consider placing in an air tight bag or container to cool or until you return it to the safe.
