

# FRONTIER™ SPORT Water Bottle Filter

To Convert a Water Bottle with a Straw into a Filter Bottle:

1. Remove cap and disconnect straw.
2. Press straw snugly onto the filter inlet fitting.
3. Place the filter and straw into the bottle and mark the straw at the rim of the neck of the bottle.
4. Remove the straw and filter and cut the straw at the mark.
5. Reconnect the open end of the straw to the cap. Re-insert the filter into the bottle and allow the cap to hang over the side, fill the bottle with water, replace and tighten the cap.

**Note:** On initial use, carbon dust can be removed by sucking water out of the straw until the water stream clears up. Simply discard the harmless, discolored water.

**Note:** Flow rates may be slightly reduced and suction a little difficult on initial use, due to entrapped air in the filter matrix. Flow rates will improve as the filter media becomes thoroughly wetted.

## Aquamira® Filtration

**Technology:** The Frontier Sport Water Bottle Filter incorporates Aquamira Filtration Technology and is tested and certified to remove >99.9% of Cryptosporidium and Giardia. If viruses or bacteria are suspected, use in conjunction with **Aquamira Water Treatment** or **Aquamira Water Purifier Tablets**.

## Miraguard™ Antimicrobial

**Technology:** suppresses the growth of bacteria, algae, fungus, mold and mildew within the filter media.

**Do Not Freeze:** Freezing a wetted filter may damage the filter media and compromise filter integrity.
